

Microsoft Teams for Mac

This document covers how to configure Teams and related assistive technology for students with visual impairments.

Students with Low Vision

Teams works well with the accessibility features included in Mac, such as Zoom and high-contrast colour schemes. In addition, the font size within Teams can be changed with the following commands:

- Increase font size Command + Plus (+)
- Decrease font size Command + Minus (-)
- Return to default font size Command + Zero (0)

Navigating Teams with a Screen Reader

Microsoft Teams can be navigated as a traditional application. VoiceOver is set up to use Teams as a regular application.

No configuration changes are needed in VoiceOver to use Teams.
